

PRODUCT BRIEF

Intel® Xeon® Scalable Platform

SECOND GENERATION

Intel® Xeon® Scalable Processors

The Foundation for Data-Centric Innovation

Empowering Transformation in a Data-Centric Era

Across an evolving digital world, disruptive and emerging technology trends in business, industry, science, and entertainment increasingly impact the world's economies. By 2020, the success of half of the world's Global 2000 companies will depend on their abilities to create digitally enhanced products, services, and experiences¹ and large organizations expect to see an 80 percent increase in their digital revenues,² all driven by advancements in technology and usage models they enable.

This global transformation is rapidly scaling the demands for flexible compute, networking, and storage. Future workloads will necessitate infrastructures that can seamlessly scale to support immediate responsiveness and widely diverse performance requirements. The exponential growth of data generation and consumption, the rapid expansion of cloud-scale computing, emerging 5G networks, and the extension of high-performance computing (HPC) and artificial intelligence (AI) into new usages require that today's data centers and networks urgently evolve—or be left behind in a highly competitive environment. These demands are driving the architecture of modernized, future-ready data centers and networks that can quickly flex and scale.

The Intel® Xeon® Scalable platform provides the foundation for a powerful data center platform that creates an evolutionary leap in agility and scalability. Disruptive by design, this innovative processor sets a new level of platform convergence and capabilities across compute, storage, memory, network, and security. Enterprises and cloud and communications service providers can now drive forward their most ambitious digital initiatives with a feature-rich, highly versatile platform.

Enabling Greater Efficiencies and Lower TCO

Across infrastructures, from enterprise to technical computing applications, the Intel Xeon Scalable platform is designed for data center modernization to drive operational efficiencies that lead to improved total cost of ownership (TCO) and higher productivity for users. Systems built on the Intel Xeon Scalable platform are designed to deliver agile services with enhanced performance and groundbreaking capabilities, compared to the prior generation.

Performance to Propel Insights

Intel's industry leading, workload optimized platform with built in AI acceleration, provides the seamless performance foundation for the data centric era from the multi-cloud to intelligent edge, and back, the Intel Xeon Scalable platform with 2nd gen Intel® Xeon® Scalable processors enables a new level of consistent, pervasive, and breakthrough performance.

2nd Gen Intel® Xeon® Scalable processor provides consistent performance for diverse workloads

	WHAT MATTERS?	INTEL® XEON® SCALABLE PLATFORM ADVANTAGES
Enterprise and Cloud	Minimize complexity with compatible virtualization infrastructure Meet stringent customer SLAs	Deploy quickly. Intel VMs coexist w/ other Intel® technology-based servers. Fast response times.
HPC	Maximize vector floating point performance and efficiency	High performance with fewer servers.
Storage	Ensure deterministic storage response	Deterministic performance. Cores, cache, memory, I/O in a single die.
Communications	Deliver diverse services efficiently	Incredible efficiency and hardware acceleration from a platform with features required for application, control, packet, and signal processing.

Support for Breakthrough Memory Innovation

A new foundation for performance begins with support for Intel's breakthrough Intel® Optane™ DC persistent memory, a new class of memory and storage innovation architected for data centric class environments. With individual module capacities up to 512 GB, Intel Optane DC persistent memory can deliver up-to 36 TB of system-level memory capacity when combine with traditional DRAM. Intel Optane DC persistent memory complements DRAM memory by affordably enabling unprecedented system memory capacity to accelerate workload processing and service delivery.

Learn more about Intel Optane DC persistent memory
intel.com/optanedcpersistentmemory

Foundational Enhancements

- **Higher Per-Core Performance:** Up to 56 cores (9200 series) and up to 28 cores (8200 series), delivering high performance and scalability for compute-intensive workloads across compute, storage, and network usages.
- **Greater Memory Bandwidth/Capacity:** Support for Intel Optane DC persistent memory, supporting up-to 36 TB of system-level memory capacity when combine with traditional DRAM. 50 percent increased memory bandwidth and capacity. Support for six memory channels and up-to 4 TB of DDR4 memory, per socket, with speeds up-to 2933 MT/s (1 DPC).
- **Expanded I/O:** 48 lanes of PCIe* 3.0 bandwidth and throughput for demanding I/O-intensive workloads.
- **Intel® Ultra Path Interconnect (Intel® UPI):** Four Intel® UPI (9200 series) and up to three Intel UPI (8200 series) channels increase scalability of the platform to as many as two sockets (9200 series) and up to eight sockets (8200 series). Intel UPI offers the perfect balance between improved throughput and energy efficiency.
- **Intel® Deep Learning Boost (Intel® DL Boost) with VNNI:** New Intel® Deep Learning Boost with Vector Neural Network Instruction (VNNI) bring enhanced artificial intelligence inference performance, with up to 30X performance improvement over the previous generation⁴, 2nd gen Intel Xeon Scalable processors help to deliver AI readiness across the data center, to the edge and back.
- **Intel® Infrastructure Management Technologies (Intel® IMT):** A framework for resource management, Intel® Infrastructure Management Technologies (Intel® IMT), combines multiple Intel capabilities that support platform-level detection, reporting, and configuration. This hardware-enhanced monitoring, management, and control of resources can help enable greater data center resource efficiency and utilization.
- **Intel® Security Libraries^o for Data Center (Intel® SecL-DC):** A set of software libraries and components, Intel SecL-DC enables Intel hardware-based security features. The open-source libraries are modular and have a consistent interface. They can be used by customers and software developers to more easily develop solutions that help secure platforms and help protect data using Intel hardware-enhanced security features at cloud scale.

- **Intel® Advanced Vector Extensions 512 (Intel® AVX-512):** With double the flops per clock cycle compared to previous generation Intel® AVX2, Intel AVX-512 boosts performance and throughput for the most demanding computational tasks in applications, such as modeling and simulation, data analytics and machine learning, data compression, visualization, and digital content creation.
- **Security^o without compromise:** Limiting encryption overhead and performance on all secure data transactions.

Innovative Integrations

Platform integrations deliver improvements in performance and latency across the infrastructure:

- **Integrated Intel® QuickAssist Technology (Intel® QAT):** Chipset-based hardware acceleration for growing compression and cryptographic workloads for greater efficiency while delivering enhanced data transport and protection across server, storage, and network infrastructure.
- **Integrated Intel® Ethernet with scalable iWARP* RDMA*:** Provides up to four 10 Gbps high-speed Ethernet ports for high data throughput and low-latency workloads. Ideal for software-defined storage solutions, NVM Express over Fabric solutions, and virtual machine migrations. Integrated in the chipset.

Industry-Leading Memory and Storage Support

Storage innovations can drive significant improvements in efficiency and performance of data-hungry workloads.

- **Support for Intel Optane DC persistent memory:** Breakthrough memory and storage memory innovation offering groundbreaking capabilities for fast storage solutions. Can be combined with Intel® Optane™ DC SSDs for the ultimate in storage and data performance.
- **Support for Intel Optane DC SSDs and Intel® QLC 3D NAND Solid State Drives:** Delivers industry-leading combination of high throughput, low latency, high QoS, and ultra-high endurance to break through data access bottlenecks.
- **Deploy next generation storage with confidence with Intel® Volume Management Device (Intel® VMD):** Enables hot swapping of NVMe SSDs from the PCIe bus without shutting down the system, while standardized LED management helps provide quicker identification of SSD status. This commonality brings enterprise reliability, availability, and serviceability (RAS) features to NVMe SSDs, enabling deployment of next-generation storage with confidence.
- **Intel® Intelligent Storage Acceleration Library (Intel® ISA-L):** Optimizes storage operations, such as encryption, for increased storage performance.

Complementary Offerings for Even Greater Performance, Scalability

Intel offers a broad hardware and software portfolio that complements this new processor.

- Intel® Ethernet 800 series products support up to 100 GbE port speed with Application Device queues (ADQ), which addresses latency-sensitive workloads for higher speed data communication. Data Plane Developer Kit (DPDK) is supported across Intel Ethernet 800 Series products for NFV acceleration, advanced packet forwarding and highly efficient packet processing.

[Learn more at intel.com/ethernet](https://www.intel.com/ethernet)

- Intel® FPGAs offer flexible, programmable acceleration, for low-latency applications, such as virtual switching, network services, data analytics, and AI.

[Learn more at intel.com/fpga](https://www.intel.com/fpga)

- A range of software tools and libraries for general and highly parallel computing help developers optimize applications for Intel® Architecture.

[Learn more at software.intel.com](https://www.intel.com/software)

Enhanced Platform Trust

Data and platform reliability and protection are key concerns for enterprises dealing with increasing concerns and scrutiny regarding data security and privacy. Intel Xeon Scalable platform helps build highly trusted infrastructures with platform data protection, resiliency, and uptime.

Increased Data Protection and Reliability Across Every Workload

- **Enhanced Intel® Run Sure Technology:** New enhancements deliver advanced Reliability, Availability, and Serviceability (RAS) and server uptime for a company's most critical workloads. Hardware-assisted capabilities, including enhanced MCA and recovery and adaptive multi-device error correction, diagnose and recover from previously fatal errors. And, they help ensure data integrity within the memory subsystem.
- **Intel® Key Protection Technology (Intel® KPT) with Integrated Intel QAT and Intel® Platform Trust Technology (Intel® PTT):** Deliver hardware-enhanced platform security[◊] by providing efficient key and data protection at rest, in-use, and in-flight.
- **Intel® Trusted Execution Technology (Intel® TXT) with One-Touch Activation:** Enhanced platform security[◊] while providing simplified and scalable deployment for Intel TXT.

As more data-rich workloads flow through the data center, this comprehensive suite of hardware-enhanced features brings better data- and platform-level protection mechanisms for trusted services in enterprise and cloud environments.[◊]

Dynamic and Highly Efficient Service Delivery

The convergence of enhanced compute, memory, network, and storage performance, combined with software ecosystem optimizations, make Intel Xeon Scalable platform the ideal platform for fully virtualized, software-defined data centers that dynamically self-provision resources—on-premise, through the network, and in the public cloud—based on workload needs.

Powerful Tools and Technologies for an Agile Data Center

Intel® Virtualization Technology (Intel® VT-x) features:

- **Mode based execution control (MBE) virtualization:** Provides an extra layer of protection from malware attacks in a virtualized environment by enabling hypervisors to more reliably verify and enforce the integrity of kernel level code.
- **Timestamp counter scaling (TSC) virtualization:** Provides workload optimization in hybrid cloud environments by allowing virtual machines to move across CPUs operating at different base frequencies.

Intel® Node Manager 4.0: Helps IT intelligently manage and optimize power, cooling, and compute resources in the data center, maximizing efficiency, while reducing the chances of costly overheats.

Faster Time to Value with Intel® Select Solutions

In today's complex data center, hardware and software infrastructure is not "one size fits all." Intel® Select Solutions eliminates guesswork with rigorously benchmark tested and verified solutions optimized for real-world performance. These solutions accelerate infrastructure deployment on Intel® Xeon® processors for today's critical workloads in advanced analytics, hybrid cloud, storage, and networking.

Enterprise and Government – Primed for Business

For enterprise data centers modernizing to take advantage of the era of advanced analytics, the hybrid cloud and future-ready storage, Intel Select Solutions can speed up your data-fueled, IT-driven business transformation.

Communications Service Providers – Tuned Network Enhancements

For Communication Service Providers transforming their network for a 5G-enabled future, Intel Select Solutions offer a faster and more efficient deployment path of tested, reliable infrastructure with verified configurations that take full advantage of virtual network enhancements that support new and emerging customer workload demands.

High Performance Computing – Accelerated Time to Insight

For research in academia and government as well as the enterprises, high performance computing (HPC) capabilities with Intel Select Solutions help push the limits of mainstream data today with deeper insights and more complex problem solving.

REFRESH 1H'19 Solution Refresh - Existing Workloads

COMING SOON 1H'19 Solution on NEW Workloads

Strong, Capable Platforms for the Data-Fueled Enterprise

Enterprises are keen to extract value from the exploding data streams being presented to them for rapid insights that can shape their business initiatives. Traditional and emerging applications in the enterprise, including predictive analytics, machine learning, and HPC, require new levels of powerful compute capabilities and massive tiered data storage volumes. The modernized data center is being architected using a converged and holistic approach that can flexibly deliver new services and improve TCO across infrastructure assets today, while providing the most seamless and scalable on-ramp to a self-governing, hybrid data center.

Yet, organizations running their foundational business workloads, such as OLTP and web infrastructure, seek to reduce TCO with higher performing infrastructures.

The Intel Xeon Scalable platform delivers next-generation enterprise capabilities to businesses through a future-ready platform that can serve the hybrid-cloud, data-fueled era, plus it helps improve day-to-day operations. This versatile platform brings disruptive levels of compute performance, coupled with memory and I/O advances, to compute-hungry and latency-sensitive applications. Combined with innovative Intel Optane DC SSDs and Intel QLC 3D NAND SSD Data Center Family to manage large data volumes across storage, caching, and memory, platforms built on the Intel Xeon Scalable platform are ready to handle the intense demands of the data and cloud era.

With a scalable portfolio of packaging options to suit diverse workload requirements, the Intel Xeon Scalable platform is a performance workhorse designed for deploying highly efficient, virtualized infrastructures for compute, storage, and networking.

Highlights for Enterprise Innovation

- 2nd gen Intel Xeon Scalable Processors
- Intel Optane DC Persistent Memory
- Intel Deep Learning Boost
- Intel Speed Select Technology
- Intel Ethernet 800 Series
- Intel Optane DC SSDs and Intel QLC 3D NAND SSDs
- Intel Infrastructure Management Technologies

Next-Generation Platform for Cloud-Optimized, 5G-Ready Networks, and Next-Generation Virtual Networks

The coming era of 5G will enable entirely new ecosystems and classes of consumer and enterprise services along with media applications on wireless and wireline networks. These data-rich, innovative use cases, driven by the new Internet of Things (IoT), visual computing, and analytics, represent significant future opportunities for communications service providers (CommSPs) to grow revenue.

The transition from purpose-built, fixed function infrastructure to a new generation of open networks is the essential first step to prepare for a 5G-enabled world. Software-defined networking with Network Functions Virtualization (NFV) is enabling new service opportunities and operations efficiencies for both communication services providers and enterprises alike. Using flexible, optimized, industry-standard servers and virtualized, orchestrated network functions will allow future-ready infrastructures to be able to deliver innovative services with efficiency and ease.

Such distributed communications networks can support extreme levels of scalability, agility, programmability, and security across an ever-growing volume and variety of networking workloads—from the network core to the edge.

The Intel Xeon Scalable platform is the basis for next-generation platforms to build virtualized, cloud-optimized, 5G-ready networks. It offers an architecture that scales and adapts with ease to handle the demands of emerging applications and the convergence of key workloads, such as applications and services, control plane processing, high-performance packet processing, and signal processing. This new processor provides a foundation for agile networks that can operate with cloud economics, be highly automated and responsive, and support rapid and more secure delivery of new and enhanced services enabled by 5G.

Highlights for Communication Service Provider Innovation

- 2nd gen Intel Xeon Scalable processor “N” SKUs, specialized for Networking/NFV

- Intel Optane DC persistent memory
- Hardware-based acceleration of encryption and compression using integrated Intel QAT
- Intel Ethernet 800 series
- Intel FPGAs maximize versatility in communications infrastructure
- Intel Infrastructure Management Technologies

Additional Resources Optimized for Communication Service Providers

The open source Data Plane Development Kit (DPDK) enables optimized communications operations on Intel Architecture. DPDK has demonstrated ability to scale performance as processor core count and performance increase; workloads, such as Vector Packet Processing (VPP) IPsec, benefit from this enhanced performance. Additionally, these libraries provide pre-optimized mechanisms to allow new processor capabilities (such as Intel AVX-512 and memory and I/O enhancements) to be able to utilize the new functionality for improved packet processing performance with less direct development effort.

Intel offers programs, such as Intel® Network Builders University, ideal for network evolution in the 5G era. With solution guidance and training from these programs, CommSPs can drive their network transformation initiatives forward with increased confidence.

NEW 2ND GEN INTEL® XEON® SCALABLE PROCESSORS SPECIALIZED FOR NETWORKING/NFV “N” SKUS

UP TO **1.25-1.58X** NFV WORKLOAD PERFORMANCE IMPROVEMENT¹⁴

Comparing Intel® Xeon® Gold 6230 N processor to Intel® Xeon® Gold 6130 processor

Additional processing headroom delivers enhanced VM/VNF capacity and density

Handle more subscriber capacity and mobile services

Reduced bottlenecks for fixed and mobile 5G networks

Featuring Intel® Speed Select Technology

New in 2019 “N”-Based NFV solutions

Breakthrough HPC and High-Performance Data Analytics Innovation

Today's scientific discoveries are fueled by innovative algorithms, new sources and volumes of data, and advances in compute and storage. Benefitting from exponentially expanding volumes and variety of data, HPC clusters are also the engine for running evolving High-Performance Data Analytics (HPDA) workloads, leading to incredible discoveries and insight for business and human understanding. Machine learning, deep learning, and AI converge the capabilities of massive compute with the flood of data to drive next-generation applications, such as autonomous systems and self-driving vehicles.

Intel Xeon Scalable platform offers a common platform for AI with high throughput for both inference and training—up to 30x higher inference⁴ using 9200 series and up to 14x higher inference⁷ throughput using 8200 series, compared to Intel Xeon Scalable processors introduced in July 2017.

HPC is no longer just the domain of large scientific institutions. Enterprises are increasingly consuming a massive number of HPC compute cycles; some of the world's largest HPC clusters are in private oil and gas companies. Research in personalized medicine applies HPC for highly focused treatment plans. New HPC installations are engaging innovative, converged architectures for non-traditional usages that combine simulation, AI, visualization, and analytics in a single supercomputer.

HPC platforms—from the smallest clusters to largest supercomputers—demand a balance across compute, memory, storage, and network. The Intel Xeon Scalable platform was designed to deliver and enable such balance with massive scalability—to tens of thousands of cores. From its improved core count and mesh architecture to newly integrated technologies and support for Intel Optane DC persistent memory and storage devices, the Intel Xeon Scalable platform enables the ultimate goals of HPC—to maximize performance across compute, memory, storage, and network without inducing bottlenecks at any intersection of resources.

The integration of Intel® Omni-Path Architecture, an end-to-end high-performance fabric, into the Intel Xeon Scalable platform delivers both increased performance and scaling to distributed, parallel computing clusters. Near linear scaling up to 32 nodes enables building large HPC solutions that are not inhibited by the interconnect. The Intel Xeon Scalable platform and Intel Omni-Path Architecture can enable new discoveries and faster solutions for highly parallel workloads in many data centers.

- Intel Xeon Platinum 9200 Processors
- Intel Optane DC Persistent Memory
- Intel Ultra Path Interconnect
- Intel Deep Learning Boost
- Intel Advanced Vector Extensions 512
- Intel Omni-Path Architecture Host Fabric Interface
- Intel Optane DC SSDs

Additional Technologies for HPC, HPDA, and AI

- A range of high-productivity software tools, optimized libraries, foundational building blocks, and flexible frameworks for general and highly parallel computing help simplify workflows and assist developers to create codes that maximize the capabilities of IA for HPC and AI.
- Optimizations for popular deep learning frameworks for IA, including Caffe* and TensorFlow* offer increased value and performance for data scientists.
- Intel® Parallel Studio XE 2017 includes performance libraries, such as Intel® Math Kernel Library for Deep Neural Networks (Intel® MKL-DNN) to accelerate deep learning frameworks on IA, and Intel® Data Analytics Acceleration Library (Intel® DAAL) to speed big data analytics.

Resources Optimized for HPC

To continue to advance discovery through HPC into the Exascale era, the Intel® Modern Code Developer Program offers developers and data scientists easily accessible online and face-to-face code modernization technical sessions on techniques, such as vectorization, memory and data layout, multi-threading, and multi-node programming.

NEW 2ND GEN INTEL® XEON® SCALABLE PROCESSORS FOR HPC

UP TO **1.7X** BETTER FLOATING POINT PER CORE¹⁵

UP TO **2X** SYSTEM MEMORY CAPACITY
Compared to Intel® Xeon® Platinum 8180 processors

Overview of 2nd Gen Intel® Xeon® Scalable Processors

Intel® Xeon® Scalable Platform

INTEL® XEON® PLATINUM 9200 PROCESSORS

Designed for high performance computing, advanced artificial intelligence and analytics, the Intel® Xeon® Platinum 9200 processors deliver breakthrough levels of performance with the highest Intel® Architecture FLOPS per rack, along with the highest DDR native memory bandwidth support of any Intel® Xeon® processor platform.

- Up to 56 Intel® Xeon® Scalable processing cores per processor
 - Two processors per 2U platform (Intel® Server System S9200WK Data Center Block)
- 12 memory channels per processors, 24 memory channels per node
- Features new Intel® Deep Learning Boost instruction for enhanced AI inference acceleration and performance
- Enhanced multi-chip package optimized for density and performance

INTEL® XEON® PLATINUM 8200 PROCESSORS

Second generation Intel® Xeon® Platinum 8200 processors are the foundation for secure, agile, hybrid-cloud data centers. With enhanced hardware-based security and exceptional two, four, and eight+ socket processing performance, these processors are built for mission-critical, real-time analytics, machine learning, artificial intelligence and multi-cloud workloads. With trusted, hardware-enhanced data service delivery, this processor family delivers monumental leaps in I/O, memory, storage, and network technologies to harness actionable insights from our increasingly data-fueled world.

INTEL® XEON® GOLD 6200 AND INTEL® XEON® GOLD 5200 PROCESSORS

With support for the higher memory speeds, enhanced memory capacity, and four-socket scalability, the Intel® Xeon® Gold 6200 processors deliver significant improvement in performance, advanced reliability, and hardware-enhanced security. It is optimized for demanding mainstream data center, multi-cloud compute, and network and storage workloads. The Intel® Xeon® Gold 5200 processors deliver improved performance with affordable advanced reliability and hardware-enhanced security. With up-to four-socket scalability, it is suitable for an expanded range of workloads.

INTEL® XEON® SILVER 4200 PROCESSORS

Intel® Xeon® Silver processors deliver essential performance, improved memory speed, and power efficiency. Hardware-enhanced performance required for entry data center computes, network, and storage.

ENTRY-LEVEL PERFORMANCE AND HW-ENHANCED SECURITY

The Intel® Xeon® Bronze processors delivers entry performance for small business and basic storage servers. Hardware-enhanced reliability, availability, and serviceability features designed to meet the needs of these entry solutions.

INTEL® SERVER SYSTEM S9200WK DATA CENTER BLOCK (DCB) TECHNICAL SPECIFICATIONS SUPPORTING THE INTEL® XEON® PLATINUM 9200 PROCESSOR

Form Factor	2U rack enclosure; up to 4 independent warm-swap compute modules
CPU	Intel® Xeon® Platinum 9200 Processors up to 56 cores
Memory	- DDR4-2933 MT/s DIMMS, 24 DIMMs per platform @ 1DPC - Supports 8 GB to 128 GB DIMM options, number, and capacity configurable
Storage	- Up to 8x M.2 SSDs per DCB (2x per compute module with 1U compute module; up to 4x M.2 SSDs and 4x hot-swap U.2 NVMe SSDs with 2U Compute Modules) - M.2 and U.2 number and capacity configurable
Ethernet	Integrated 1Gbase-T RJ45 (two ports per compute module), optional shared 1Gbase-T RJ45 management port chassis card
Cooling	Available with high flow rate air-cooling or integrated liquid-cooling options
I/O	2 x16 Gen3 PCIe slots per 1U compute module; 4 x16 Gen3 PCIe slots per 2U compute module for high-speed networking support
Manageability	Dedicated, consolidated Management Module
Security & Serviceability	TPM 2.0 (optional); hot-swap/redundant fans, and PSUs; light path diagnostic LEDs

Not a comprehensive list of all features and capabilities. Learn more at [intel.com/serverproducts](https://www.intel.com/serverproducts)

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Performance varies depending on system configuration.

No product or component can be absolutely secure.

Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. For more complete information about performance and benchmark results, visit <http://www.intel.com/benchmarks>.

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit <http://www.intel.com/benchmarks>.

Intel® Advanced Vector Extensions (Intel® AVX)* provides higher throughput to certain processor operations. Due to varying processor power characteristics, utilizing AVX instructions may cause a) some parts to operate at less than the rated frequency and b) some parts with Intel® Turbo Boost Technology 2.0 to not achieve any or maximum turbo frequencies. Performance varies depending on hardware, software, and system configuration and you can learn more at <http://www.intel.com/go/turbo>.

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Cost reduction scenarios described are intended as examples of how a given Intel-based product, in the specified circumstances and configurations, may affect future costs and provide cost savings. Circumstances will vary. Intel does not guarantee any costs or cost reduction.

Intel does not control or audit third-party benchmark data or the web sites referenced in this document. You should visit the referenced web site and confirm whether referenced data are accurate.

FTC Optimization Notice

If you make any claim about the performance benefits that can be achieved by using Intel software developer tools (compilers or libraries), you must use the entire text on the same viewing plane (slide) as the claim.

Optimization Notice: Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Notice Revision #20110804

Performance results are based on testing as of dates shown in configuration and may not reflect all publicly available security updates. See configuration disclosure for details. No product or component can be absolutely secure. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit www.intel.com/benchmarks.

Pricing guidance as of March 1, 2019. Intel does not guarantee any costs or cost reduction. You should consult other information and performance tests to assist you in your purchase decision.

¹⁴ Up to 1.25 to 1.58X NVF Workload Performance Improvement comparing Intel® Xeon® Gold 6230N processor to Intel® Xeon® Gold 6130 processor.

VPP IP Security: Tested by Intel on 1/17/2019 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Neon City platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYDCRB1.86B.0155.R08.1806130538, ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.15.0-42-generic, Benchmark: VPP IPsec w/AESNI (AES-GCM-128) (Max Gbits/s (1420B)), Workload version: VPP v17.10, Compiler: gcc7.3.0, Results: 179. Tested by Intel on 1/17/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.PFT.0569.D08.1901141837, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: VPP IPsec w/AESNI (AES-GCM-128) (Max Gbits/s (1420B)), Workload version: VPP v17.10, Compiler: gcc7.3.0, Results: 225

VPP FIB: Tested by Intel on 1/17/2019 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Neon City platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYDCRB1.86B.0155.R08.1806130538, ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.15.0-42-generic, Benchmark: VPP FIB (Max Mpackets/s (64B)), Workload version: VPP v17.10 in ipv4fib configuration, Compiler: gcc7.3.0, Results: 160. Tested by Intel on 1/17/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.PFT.0569.D08.1901141837, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: VPP FIB (Max Mpackets/s (64B)), Workload version: VPP v17.10 in ipv4fib configuration, Compiler: gcc7.3.0, Results: 212.9

Virtual Firewall: Tested by Intel on 10/26/2018 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Neon City platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 4x Intel XXV710-DA4, Bios: PLYDCRB1.86B.0155.R08.1806130538, ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.15.0-42-generic, Benchmark: Virtual Firewall (64B Mpps), Workload version: opnfv 6.2.0, Compiler: gcc7.3.0, Results: 38.9. Tested by Intel on 2/04/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.PFT.0569.D08.1901141837, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Virtual Firewall (64B Mpps), Workload version: opnfv 6.2.0, Compiler: gcc7.3.0, Results: 52.3

Virtual Broadband Network Gateway: Tested by Intel on 11/06/2018 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Neon City platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYDCRB1.86B.0155.R08.1806130538, ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.15.0-42-generic, Benchmark: Virtual Broadband Network Gateway (88B Mpps), Workload version: DDPK v18.08 ip_pipeline application, Compiler: gcc7.3.0, Results: 56.5. Tested by Intel on 1/2/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.PFT.0569.D08.1901141837, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Virtual Broadband Network Gateway (88B Mpps), Workload version: DDPK v18.08 ip_pipeline application, Compiler: gcc7.3.0, Results: 78.7

VCMTS: Tested by Intel on 1/22/2019 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Supermicro®-X11DPH-Tq platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 4x Intel XXV710-DA2, Bios: American Megatrends Inc.* version: '2.1', ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Virtual Converged Cable Access Platform (iMIX Gbps), Workload version: vcmts 18.10, Compiler: gcc7.3.0, Other software: Kubernetes* 1.11, Docker* 18.06, DDPK 18.11, Results: 54.8. Tested by Intel on 1/22/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.PFT.0569.D08.1901141837, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Virtual Converged Cable Access Platform (iMIX Gbps), Workload version: vcmts 18.10, Compiler: gcc7.3.0, Other software: Kubernetes* 1.11, Docker* 18.06, DDPK 18.11, Results: 83.7

OVS DDPK: Tested by Intel on 1/21/2019 1-Node, 2x Intel® Xeon® Gold 6130 Processor on Neon City platform with 12x 16GB DDR4 2666MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 4x Intel XXV710-DA2, Bios: PLYXCRB1.86B.0568.D10.1901032132, ucode: 0x200004d (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.15.0-42-generic, Benchmark: Open Virtual Switch (on 4C/4P/8T 64B Mpacket/s), Workload version: OVS 2.10.1, DDPK-17.11.4, Compiler: gcc7.3.0, Other software: QEMU-2.12.1, VPP v18.10, Results: 9.6. Tested by Intel on 1/18/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.86B.0568.D10.1901032132, ucode: 0x4000019 (HT= ON, Turbo= OFF), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Open Virtual Switch (on 6P/6C/12T 64B Mpacket/s), Workload version: OVS 2.10.1, DDPK-17.11.4, Compiler: gcc7.3.0, Other software: QEMU-2.12.1, VPP v18.10, Results: 15.2. Tested by Intel on 1/18/2019 1-Node, 2x Intel® Xeon® Gold 6230N Processor with SST-BF enabled on Neon City platform with 12x 16GB DDR4 2999MHz (384GB total memory), Storage: 1x Intel® 240GB SSD, Network: 6x Intel XXV710-DA2, Bios: PLYXCRB1.86B.0568.D10.1901032132, ucode: 0x4000019 (HT= ON, Turbo= ON (SST-BF)), OS: Ubuntu* 18.04 with kernel: 4.20.0-042000rc6-generic, Benchmark: Open Virtual Switch (on 6P/6C/12T 64B Mpacket/s), Workload version: OVS 2.10.1, DDPK-17.11.4, Compiler: gcc7.3.0, Other software: QEMU-2.12.1, VPP v18.10, Results: 16.9

¹⁵ Up to 1.7x better floating point perf/core using one copy SPECrate2017_fp_base* 2 socket Intel 8280 vs 2 socket AMD EPYC 7601. Xeon-SP 8280, Intel Xeon-based Reference Platform with 2 Intel® Xeon® 8280 processors (2.7GHz, 28 core), BIOS ver SE5C620.86B.0D.01.0348.011820191451, 01/18/2019, microcode: 0x5000017, HT OFF, Turbo ON, 12x32GB DDR4-2933, 1 SSD, Red Hat EL 7.6 (3.10.0-957.1.3.el7.x86_64), 1-copy SPECrate2017_fp_rate base benchmark compiled with Intel Compiler 19.0.1.144, -xCORE-AVX512 -ipo -O, executed on 1 core using taskset and numactl on core 0. Estimated score = 9.6, as of 2/6/2019 tested by Intel with security mitigations for variants 1,2,3,3a, and L1TF. AMD EPYC 7601, Supermicro AS-2023US-TR4 with 25 AMD EPYC 7601 with 2 AMD EPYC 7601 (2.2GHz, 32 core) processors, BIOS ver 1.1c, 10/4/2018, SMT OFF, Turbo ON, 16x32GB DDR4-2666, 1 SSD, Red Hat EL 7.6 (3.10.0-957.5.1.el7.x86_64), 1-copy SPECrate2017_fp_rate base benchmark compiled with AOCC ver 1.0 -Ofast, -march=znver1, executed on 1 core using taskset and numactl on core 0. Estimated score = 5.56, as of 2/8/2019 tested by Intel. Platinum 8280 vs Platinum 8180: 1-node, 2x Intel® Xeon® Platinum 8280M cpu on Wolf Pass with 384 GB (12 X 32GB 2933) total memory, ucode 0x400000A on RHEL7.6, 3.10.0-957.el7.x86_65, IC19u1, AVX512, HT on all (off Stream, Linpack), Turbo on all (off Stream, Linpack), result: est int throughput=317, est fp throughput=264, Stream Triad=217, Linpack=3462, server side java=177561, AIXPRT OpenVino/RN50=2324, test by Intel on 1/30/2019. vs. 1-node, 2x Intel® Xeon® Platinum 8180 cpu on Wolf Pass with 384 GB (12 X 32GB 2666) total memory, ucode 0x200004D on RHEL7.6, 3.10.0-957.el7.x86_65, IC19u1, AVX512, HT on all (off Stream, Linpack), Turbo on all (off Stream, Linpack), result: est int throughput=307, est fp throughput=251, Stream Triad=204, Linpack=3238, server side java=165724, AIXPRT OpenVino/RN50=1170, test by Intel on 1/29/2019.
